

Status of the SY120 test beam – ChuckB, 01/30/03

- Engineering test – 120 GeV beam to Switchyard Dump
 - Shielding Assessment – waiting on Mike Gerardi
 - Safety Assessment – waiting on Shielding Assessment
 - MI group needs to schedule study time and assign liaison
 - Power supply and Interlock testing is almost done

- Beam to M01
 - Power supply testing not complete – after shutdown
 - Interlocks not complete – after shutdown

- Beam to MT6
 - Pinhole collimator broken – parts on order
 - Interlocks not complete – after shutdown
 - At least 1 month away!?

Status of the E907 beam – ChuckB, 01/30/03

- Design –
 - Primary beam needs beam stop and collimator controls and Interlocks
 - Secondary Beam - Kostin found bad chromaticity at secondary target
 - MT6 Shielding design – just started
 - Magnet stands – just started
 - E907 Beam Chambers – need information
 - Power supply assignment and testing – not done, MTest first
- Beam to M01
 - Hopefully in about a month or so
- Beam to MC6
 - At least 3 months away!!??
